Notes to Schedule

Actuarially determined contribution rates are calculated as of June 30, two years prior to the end of the fiscal year in which contributions are reported. Contributions for the fiscal year ending September 30, 2021 were based on the June 30, 2019 actuarial valuation.

Methods and assumptions used to determine contribution rates:

Actuarial cost method Ultimate Asset Reserve

 $\begin{array}{ll} \mbox{Amortization method} & \mbox{N/A} \\ \mbox{Remaining amortization period} & \mbox{N/A} \end{array}$

Asset valuation method Market value of assets

Inflation 2.75%

Salary increases 3.00 - 4.50%, including inflation

Investment rate of return 6.25%, net of pension plan investment expense, including inflation

This schedule is presented to illustrate the requirement to show information for 10 years. However, until a full 10-year trend is compiled, governments should present information for those years for which information is available.
